# 會考地理科答案

( GEOGRAPHY (ANSWERS) 1000E N = Handalay R = Rangoon

mainly but timber mills are located at Rangoon which is the important collecting and exporting centre. In the forest, elephants and buffaloes are trained to lift the. heavy tree trunks, carry them across the slippery ground nd push them into the streams. The logs are built onto bamboo or other lightwood rafts before being floated townstream. The rivers Irrawaddy, Salween, and Chindwin ere useful streams for floating the logs down to-the saw-nills.

The most important officers of Burns extends from Tenangyaung to Sabe inCentral durma. The main mining centres are Singu and Yenangyaung. Most of the oil produced is sent by pipeline to Syriam, near Rangoom, where it is refined. Petroleum products are distributed to the urban centres in North and Central Burns vie the Chief rivers.

peasoin is an important collecting of rice for the western part of the Irrayaddy Delta where rice monoculture is the rule. walls dangoon serves the eastern part of the delta. In this region, rice is transported in small flat-bottomed boats and barges from the fields to the rice mills and from the rice mills to the collecting centres, Bassein and Rangoon, through the many Listributeries. Rice from the delta area is sent upstream via the Irrawaddy and Chindwin waterways to Central and North Burna,

Potton is essentially a Dry Zone crop which forms the basis of the minning and weaving industry at Mandaley. the phief collecting contre. Part of this product is sent to the densely populated centres in the delta region via the rivers mentioned above or exported through Rangoon.

To sum up briefly, much of the communications of the given four commodities are carried on by water. Cheap river transport is of great importance for the distribution of these goods. The Irrawaddy is navigable to Bhamo ( 900 miles from the sea), and the Chinawin allows boets to sail upstream for 300 miles from the confluence.

4. (a) Only 13% of the total area of the Colony of Hong Kong! is used for groung orops. The following ressons may account for this: A. Rong Kong is a hilly terrain. There are few plains and valleys. Thus, the amount of cultivable land is yory

B. Rainfall is highly excatic in the Colony that farmers have to rely on irrigation means for watering the fields.] The problem of water supply is further accontuated by the purced relief which causes rapid surface run-off. Where irrigation water is not available, even flat

sites have to be left untilled. There is a continual and stoady demand for land for Andustry and housing in the Colony as dramatic change. eve taking place in the industrial and commercial sectors. Land resources should be utilised in such a way that the maximum return can be acquired. Farmers are therefore not) in a position to compete successfully with their rivals who promise higher returns. The expanding urban areas tend to encroach more directly on arable land rather than on marginal land. This is reflected in the fact that the total soreage devoted to cultivation has been dwindling in the last two decades,

b) I - Shek Pik District. It has been utilised for the construction of a reservoir in the catchment area of which no cultivation is allowed.

2 - Castle Peak East. This is a rugged area rising to over 1500 feet above sequilevel. It is a soriously eroded area with no vegetation cover.

5 --- Bek Kong. The area has been built into an | -

A --- Tai Mo Shan. The highest elevation reached is 3144 feet. This were an important part of the mountainous backbone of the Colony. Only rough pasture manage to survive on these highlands.

5 - Kai Tak & San Po Kong district, This is a built-up area in use for purposes other than' aultivation.

(o) The areas lettered E.F.C.H are the Silver Mine Bay, the Yuen Long - Sheung Shui Basin, Tai Po, and Ho Chung respect-1vely. Factors which have contributed to the development of these areas as intensively farmed districts are: A. All these are lowland areas. F is a part of the most

extensive plain of the Colony and the others are scattere. packets of valley floor which readily lend themselves to cultivation.

D. Water for irrigation can be obtained from the streams that pass through the region or nearby, namely, the Indus , the Shum Chun, the Lam Tsuen, and numerous little creeks pouring down slope and bringing water to be kept W. Communication is easy for they are either room points

of land routes or at the coast. The roads and the railway! offer convenient and regular delivery of farm produce to qther parts of the Colony. D. These areas have taken shelter of the valleys where they

are found or are protected against the attack of strong winds by hills.

MATHEMATICS PAPER I

SECTION A

vivision method:

(2) Find the K.C.F. by the 1904 division methodi

 $4t^2+95^4+12t5^2=(at)^2+a(at)(35^2)+(35^2)^2$ = (2x+35\*)2 -: L.C. M. = (t-s)(at-35)(at+35)

3, The cost price of pencils = + k per dozen = 100k cents each.

The profit is 20% Then, the selling price of pencils = (1+20%) of 1005 cents each) = 180 x 180k cents each

= 10 k cents each which is given as I cents each. ... j\_cents = 10 k cents ov 7 = 10K.

Let F(x) = x3+ 3x2 - 11x - 10 If F(x) is exactly divisible by x+2 Then, F(-2) = (-2) + p(-2) - 11(-2) - 10 = 0 12. -8 +4 1 + 22 - 10 =0

This method is based on the Remainder Theorem? When the remaining, then the function is exactly divisible

DON'T HER THAT FOR YOUR MAZING You must ausuar by positive indices

6, The school-time for the boy in the marning from 9 pan -1 100 pm 18.46. a or or or or or or afternoon of 15 per-afterper 14.144 10 1 day : 4 h. + 15h. = 5+h.

1. .. I week! 5 = 48 = 48 = 48 = 48. + +0 weeks: 28 = hr. x40 = 1150 hr.

ANS.: The boy attends 1150 hr. altogether for 40 uts. 7, The cube root of 0.02874 = \$ 0.02874 0.04574 7.4585

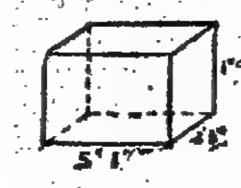

7.4862

8, Evaluate by long division! 1.70748 - 45.8 - 0.0374/

45,8 1,707+5 3304 ·

m B cu. jd. ANEI There are Beu. nd. in the rectangular solid.

The ratio of minture, by volume = A: B = 713 ce of liquid A weight 1.408 gm.

> . 7 ce. of light A weigh 1.408 gmx 7 = 9.856 gm. " B 1. 11.320 mx3 = 3.960 gr

.. 10 cc. of mixture iveigh: 9.856 qn+3.760 gn=13.816 gn.) 1 cc. " " " " " 1 1 1 1. 1. 28169m.

Pris. 1 C.C. of the mixture weighs 1.38 gm. (cor. to 35)

To express : (is the , no. correct to three sig. tigi.

Note withe number of significant figures should be counted from the first significant digit. " is the first, significant digit in the given no., hence we should start our counting from 4.

iii) "O" is also a significant figure when it appeared after the stated sig. digit. The last digit " a" on the 2nd part is very important.

2.00 4520 4 00 00 452 (Con. to 3 fig.) ANSI 0.004520 4 20.004 540 ( Com. 40 4 fig.)

MATHEMATICS PAPER 1/

Arme allowed - Two hours.

Attempt ALL questions in Section A and FOUR questions in Section B There are 40 marks for Section A Each question in Section B has 15 marks.

# should be taken if required, as: 22. SECTION A (accuracy IN ESSENTIAL)

Find the H C. F of 1.904 and 2.720.

Find in factors the L. C. M. of 212 + 822 - 384 412 - 984. 412 + 984 + 12182

Pencils are bought at \$k per dozen and sold at J cents each, making 20% profit Give jin terms of k.

Find p.if.  $x^1 + \rho x^2 - 11x + 10$  is exactly divisible by (x + 2), Simplify, and express with positive indices;

A child attends school from 9:00 s.m. to 1:00 p.m. and from \$1.00 p.m. to 4 00 p m . every day except Saturdays and Sundays for 40 weeks ' How many hours does he attend altogether?

Find the cube root of 0.02874 correct to 3 significant figures.

1.70745 by long division and express the result as an exact

How many cubic yards are there in a rectangular solid whose edges are 5 yards 1 foot. 2 feet 3 inches, and 1 yard 9 inches?

Two liquids, A and B, are mixed together in the ratio 7:3 by volume. I cu er of A weighs 1.408 gms.; I cu. cm. of B weighs 1.320 gms. How many gms does I cu.cm. of the mixture weigh, correct to three eignificant figures?

Express 0-0045204 correct to three significant figures, AND to four eighificant figures.

A complete swing of a penautum, or tengen a cons. . takes t secs. . where y

From the formula given in question id. evaluate t when d = 20 and g = 980

Express d in terms of the other letters.

Given  $xy = \frac{9}{xy} = 8$ , find xy.

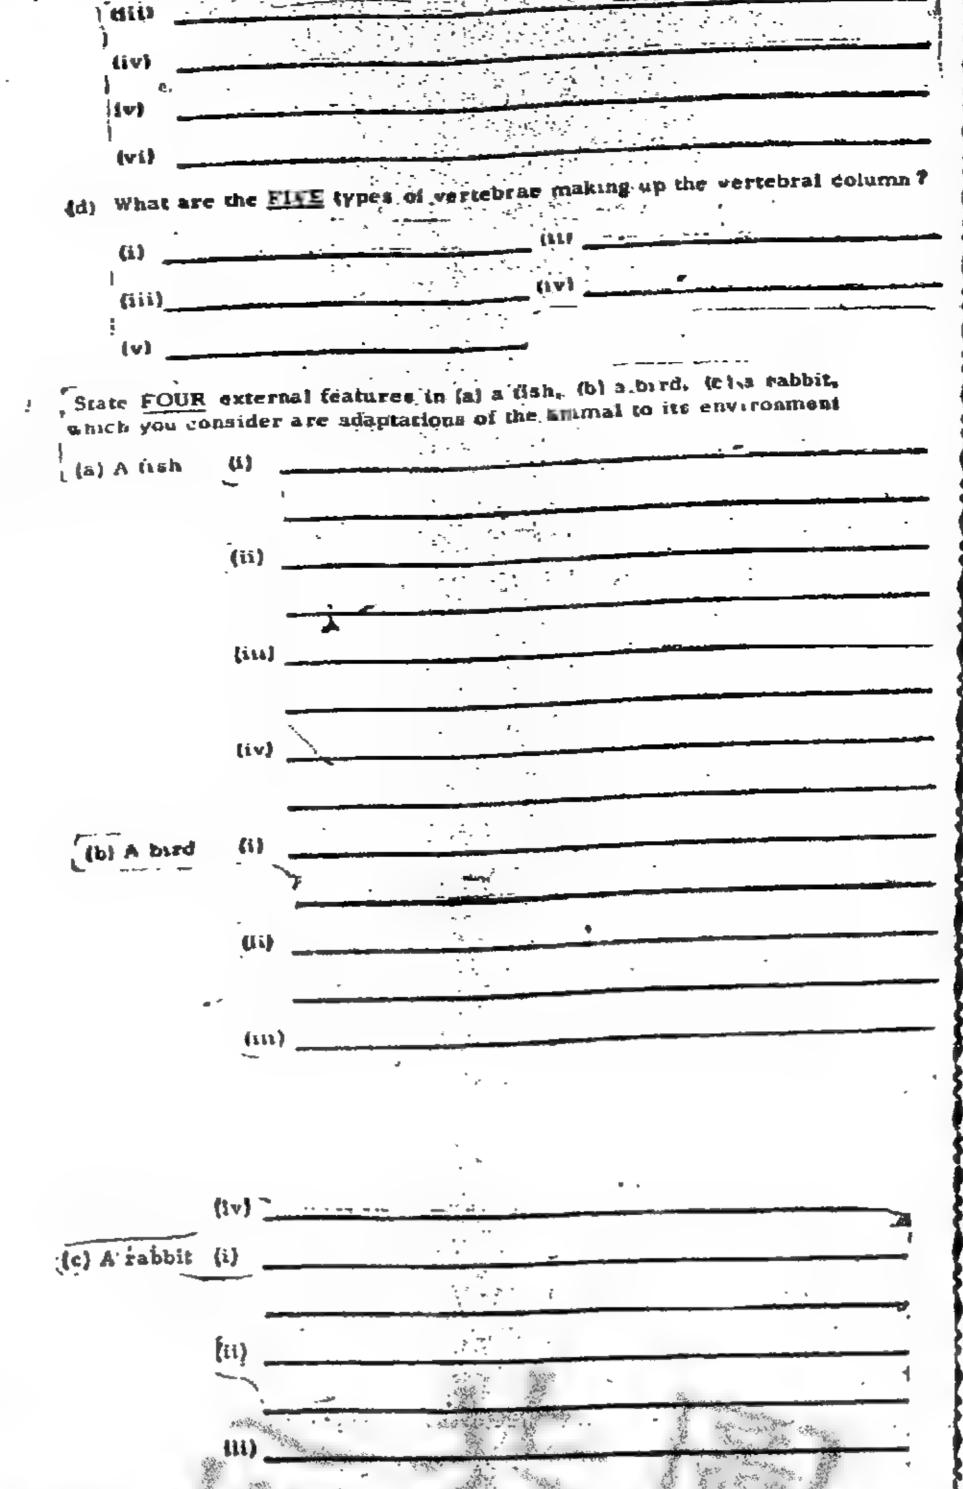

SECTION B (a)

The figure shows the cross-section ABCDEF of a water tank of length & feet AB&BC=CD=DE=EF=10 inches. AF and CD are horizontal; AB and FE are vertical; BC and DE are inclined at 45" to the horizontal.

the volume of water contained, in cubic feet, when it is full (ii) the depth of the water-surface below the top, when the tank ...

b) A hemispherical howl, of radius r cm. . is partially filled with water. shild adds a number of glass marbles, which are spheres of diameter b ams until the bowl is just full. If the number of marbles is q, and the volume of water was ... of the bowl's capacity, give r in terms of the other lettere

mixing them in the ratio 2:2:3 respectively, and selling them at \$3.50 per 🛬

State THREE important functions of humus in the soil. b) State TWO reasons why a fertile soil must contain oxygen. (a) Give the main aim of doing a water and periment.

BIOLOGY (1) By R.S. H. Tsu.

Suggested Answers For Hong Kong English School Certificate Examinations

State Seven functions of the liver of a mammal; Formation of bile to help for digestion of food in the small intestine and duodemum and decomposition of the hemoglobin

of the red blood cells.

(b) Storage of glycogen - By enzymic action glycogen is converted; into glucose and enters circulation so as to maintain the normal concentration of blood sugar.

(a) Storage of iron - Iron from the hamogloblin of destructed red) blood cells is stored in liver for manufacture of new blood

(d) Deamination of excess amino acids - The nitrogen containing in the liver in the direct for excretion by kidney.

(e) Formation of fibrinogen - which is the essential element for formation helping for coagulation of blood. (1) Storage of blood - There are multi-lobes in the liver for

storage of large amount of blood when the circulatory system !

de overfinade (g) Detoxication of blood - The toxine released by the action of bacteria on amino acids in the large intestine are detoxicated in the liver.

State the function of Each of the following:

(a) The root cap - to protect the tender growing region just behind it (or to function as a drill along the passage through the soil

(b) Contractile roots - to pull down the stored-food in the tuber. - beneath the soil to prevent being eaten by insects or animals.

(c) Stipules - to protect the young leaves in the bud ( or to carry on manufacture of food for the growing plant)

3.1 This is the skeleton of a rabbit as seen from the left side: ... (Refer to the diagram given) (in M.K.E.S.C. Tapen)

(&) Name the parts ... - y. 1. Scapula

> 2. Sternum (Breast bone) 3. Patella

4. Femur. 5. Fibula

6. Ilbia 7. Ulma

8. Racijus 9. Humeru

(b) What twose of joint is present at (i) X and (ii) Y ?

(1) Ball and sooks t joint B

Let State Six functions of the skeleton of a mammal:

(1) TO Torm's framework to support the body and supply regions for muscle attachment. ((11) To protect certain underlying delicate organs such as brain;

in cranium. (iii) To Give shape to the body. with) To form a system of levers by means of which the body can move and travel from place to place (i.e. locomotion)

F(v) Manufacture of enythrocytes. (vi) To reserve calcium and phosphorus in the bones of the body,

(d) What are the five types of vertebras making up the vertebral column?

(1) Cervical, (11) Thoracio

(111) Limber (iv) Sacral -

(v) Coocygoni (Coccysc)

State Four external features in (a) a fish, (b) a bird; (c) a rabbit which you consider are adaptations of the animal to its environment;

(a) 1 Ilm 11 scales - are bony plates in the skin, overlapping each other and give a protective covering of the

(11) The lateral line - function as sense organ to detect wavy movement in the water.

(111) Fins - To give stability and control the direction of movement during swimming. (iv) The Operculum - is a bony structure covering and

protecting the gills and plays an important part in the breathing mechanisms. [b] A birds (1) The modified fore-limbs are wings with a large. surface area provided by feathers for flying

(11) Feathers + to protect the skin of the bird and forms as a fan to uphold the body with air under so as to support the bird in air as well as to repel water.

(iii) Light body - because of the hollow bones which make the bird's body light. (iv) The shape of the bird is stream lined in flight.

(a) A rabbit: (1) Long hairs (Fur) - to keep its body warm as they form a layer to insulate the cold air from reaching the body skin of the rabbit. (11) Long ears - to catch slightest sounds.

help of strong and muscular food region.

(111) Large prominent eyes - set at the sides of the head so that they have a wide range of vision. (1v) Long hind legs end short fore legs for speeding, .running in a series of leaps accompanied by the

(a) State three important functions of humus in the soil. (1) To absorb and holds a lot of water. (11) To supply mineral salts from decayed body of plant and animals for plant growth (111) To make soil fertile and give soil its dark colour.

(b) State two reasons why a fertile soil must contain oxygen. 1) Free nitrogen cannot be absorbed by root-hairs except by firstly exidation of the mitrogen to form mitrite finally into nitrates which is then absorbed through root hairs by the plants.

'11) In order to have the process of nitrogen mastion free living pacteria and bacteria associated with the roots of some green plants must be present. They mostly breathe

lack has read 45 pages of a book. If the book has 73 pages, how many pages has he still to read? 」積色電子景府書 45頁、 為 較 高 共 舊 73頁。 問 图 修 \

The required number of pages which he still has to read - 73 - 45 ■ 28

Answer: He still has 28 pages to read. 〈答 還餘28頁末看。〉

EXAMPLE 4-

What must be added to three hundred and twenty-five to make く、325 随加上指干す得1304?>

The required value (值)

- 1304 - 1325

Answer: 979 must be added to 325 to make 1304.

人答: 處加I 979>

EXAMPLE 5

There are 12.075 books in a school library ( 图音館 /. but 1,936 books are out on loan (情出). How many books are still in the liberry? ...

~ / 景校閱書館存舊12075 本, 若已借出1436 中 图 证 \ . The number of books which are still in the library ■ 12.075 - 1.936 ····

= 10,139

Answer: 10,139 books are still in the school library. 〈答: 遊錄 10134 所首在圖 首館中。〉

EXAMPLE 6

Mark started a job at 10 minutes to three and finished it at half pest five. How long did he take to finish the tob? 1 馬克做某件工程,由二時五十分開始,直至五時半才工作、

、完畢.間所需.時間為若干? The required time taken = 5 hr. 30 min. - 2 hr. 50 min. # 2 hr. 40 min.

Answer: Mark took 2 hours 40 minutes to finish the job 一人智: 馬克爾 2時40分去完成設工程。> EXAMPLE 7

A tin filled with oil weighs 4 lb. 5 oz. The tin weighs 1 1b. 7 oz. Find the not weight (治里.) af oil. The required net weight of oil

# 中中會考打字科試題

SECTION' I - SPEED AND ACCURACY TEST

At half past ten the ghost heard the family going up to bed. For some time he was disturbed by wild shricks of laughter from the twins, who, with the light-hearted gaiety of schoolboys, were evidently amusing themselves before they retired to rest, but at a quarter past eleven all was still, and, as midnight sounded, he sallied forth. The owl beat against the window panes, the raven croaked from an old yew tree, and the wind could be heard meaning round the house: but the family slept unconscious of their doom.

He stepped stealthily out of the wainscoting, with an evil smile on his cruel, wrinkled mouth, and the moon bid her face in a cloud as he stole past the great oriel window, where his own arms and those of his murdered wife were blazoned in azure and gold. On and on he glided like an evil shadow, the very darkness secuing to loathe him as he passed. Once he thought he heard scmething call, and stopped; but it was only the baying of a dog from the Red Farm, and he went on, muttering strange sixteenthcentury curses, and ever and anon brandishing the rusty dagger in the midnight air. Finally be reached the corner of the passage that led to the luckless son's room, Just for a moment he paused there, the wind blowing his long grey locks about his head, and twisting into gratesque and fantastic folds the nameless horror of the dead man's shroud. Then the clock struck the quarter, and he felt the time was come. He chuckled to himself, and turned the corner; but no sooner had be done so, than, with a piteous wait of terror, he fell back, and hid his blanched face in his long beny bands. Right in front of him was standing a horrible spectre, motionless as a carven image, monstrous as a madman's dream, Its head was bald and burnished; its face round, fat and white; and hideous laughter seemed to have writhed its features into an eternal grin From the eyes streamed rays of scarlet light, the mouth was a wide well of fire, and a hideous garment evathed his form. On its bresst was a placard with writing in antique characters, some scroll of shame it seemed, some record of wild eins, and, with its right band, it bore aloft a falchion of gleaming steel. Oscar Wilder The Canterville Chost.

State in words the relationship between:-

\_pressure.

the volume and temperature of a fixed mass of gas at constant)

(ii) the pressure and temperature of a fixed mass of gas at constant volume. At 7°C, the pressure gauge of a gas cylinder shows a pressure of 44 lbs/sq. in. above that of the atmosphere. What will be the new reading of the gauge if the temperature rises to 27°G assuming that the volume of the cylinder does not change? (Atmospheric Pressure = 15 lbs/sq.in.) THE GENERAL SCIENCE 4 (5. (b) cont) State in words Ohm's Laws From Ohm's Law derive a definition of electrical resistance; Draw a diagram showing the electrical circuit you would use to fuld the resistance of a length of water Draw simple labelled diagrams to show the shape and position of the mentacus of (i) Water mit) Mercury, each in a capillary tube itsed vertically so that the lower end of the tube is below the surface of the nquis DIAGRAMS: (as) . Mercury Al Water Give reasons for the shape and position of the meniscus in each case. State THREE factors which influence the pitch of a note produced by the vibration of a stratched string. What is the difference between the parts labelled 1 and 37 What is the main food reserve present in (4)? ['(d) . How would you test for the presence of this food? 9. Name the food for each of the following insects when it is (a) a larva, (b) an aduit. (b) Adult (a) Larva Butterfay. Female mosquito Housefly Write the word or expression that best completes each of the following statements:

(a) A mature cell in the human body that is normally found without a

The ductless glands which are located inside the pancreas are called

(b) Food is moved along the digestive tube by a process called

(d) The enzyme responsible for the clotting of soluble proteins of milk is: PART II (120 marks) Attempt any FOUR questions. Each question carries 30 marks. Illustrate your answers wherever possible with large, clear fully labelled diagrams. 4. (a) Describe, with the aid of diagrams, how air passes into the lungs of any mammal you have studied and how the oxygen is transferred into How could you show experimentally that a green plant respires? (a) Make a clear fully labelled sectional diagram to show the structure of a mammahan eye. (b) State the functions of the various parts of the eve. (c) Give clear simple diagrams to show how the defects of long sight can be corrected. Briefly describe the process of nutrition in the following organisms:-(a) an Amoeba, (b) a Spirogyra, (c) a named internal animal parasite; (d) a named saprophyte a) With the aid of a fully labelled diagram of the skin of a mammal, describe the structure of this organ. (b) State the functions of the skin of a mammal. (c) What functions of the mammalian skin do you consider are similar to functions carried out by the epidermus of a flowering plant. (a) State the conditions necessary (or seed germination and the further ) conditions required for healthy growth or seedlings to mature plants, (b) Describe epigeal germination as shown by a named seed. (c) State clearly the functions of cotyledons in the different stages of germination of this seed. PART II (120 marks, Answer FIVE questions only. Not more than TWO questions must be answered from any one section. time chemical equations wherever they serve to amplify your answers. Section I (Chamistry) (a) What is meant by the term carbohydrate? Name THREE different types of carbohydrate and describe a chemicar test for the identification of each. Describe fully how you would obtain a small quantity of reasonably pure alcohol from augar. (Solvay) Process.

Describe the manufacture of codium carbonate by the Ammonia - Soda

State and explain what is observed when sodium carbonate is:

(i) treated with dilute hydrochloric acid.

(ii) dissolved in water to which neutral litraus has been added. )

(iii) added to a solution of calcium sulphate,

eulphide.

(b) . Hydrogen sulphide occurs commonly as an impurity in coat gas. Why is it considered necessary to remove this impurity and how is it done?

Describe the laboratory preparation and collection of dry hydrogen

If you were given a sample of lead nitrate and a sample of zinc nitrat how would you use hydrogen sulphide to identify the two substances?

What would be the effect off

passing hydrogen-sulphide into an acidified solution of potassium permanganate.

(ii) inverting a jar of sulphur dioxide over one of hydrogen sulphid

Section U (Physics)

Give TWO differences between a real and a virtual image

Draw ishelled ray diagrams to show the conditions under which the following may be formed:

(4) An enlarged virtual image.

(ii) A diminished real image. (iii) An enlarged real image.

Draw a diagram (no rays required) to show bow you would arrange two lenses to form EITHER an astronomical telescope OR a compound microscope. Show on your diagram the principal focus and the type of each lens and the positions of the object, intermediate image and final image.

Draw a tabelled diagram of a simple telephone circuit showing clearly the construction of the transmitter (microphone) and the receiver. State clearly how it is made possible for the sound produced at the transmitter to be heard at the receiver.

Describe an experiment to show how the extension of a spiral spring varies as the weight attached to one end of the spring is gradually increased until the spring becomes permanently stretched.

Draw a simple graph of the weight attached against the extension of the spring and explain the shape of your graph.

A spiral spring is 20 cm. in length. When a solid weighing 80 gms. is suspended from one end of the spring the length of the spring becomes . The solid is then completely immersed in water and the tength or the

spring is reduced to 22.5 cm.

the density of the solid.

the length of the spring when the solid is ]

immersed in a liquid whose density is 0.8 gm/a. &.

- distance of screen from lens

英中會考歷史科答案、廣文謙

Hong Kong English School Certificate Examination

ANSWERS (History II) By Mr. Wong Man-Homm

(Continued) (3) To what extent was the dispute over railways between the central government and the provincial authorities in China responsible

for the outbreak of the Chinese Revolution of 19117

The provinces were opposed to the policy of the government tending to further centralization, and manifested opposition in regard to the construction of the proposed railways. They demanded that the financing and building of these roads should to left in the hands of the provincial authorities. The government, however, entered into negotiations with a delegate representing four nations for the building of the Canton-Hankow and Szechuan-Hankow railways. The Chinese generally did not trust the government in the raising of large sums of money from foreign captialists, and were afraid it would lead to a twofold evil, first the further into ference of foreigners in Chinese affairs, and secondaly the increase of the power of the Manchus as they could use the railways for their troops and thus hold China in complete subjection to the throne.

When an edict was issued that all trunk lines already constructed were to be redeemed and to revert to the central government, and that all new lines were to be constructed by the central government, there was much excitement throughout the country and many memorials were sent up to Peking denouncing the policy.

In Szechuan especially, strong resistance was manifested, and soon the whole province was in revolt. Tuan Fang, who had been appointed Director-General of the Canton-Hankow and Szechuan-Hankow railways lost his life on his way to Szechuan at the hands of his own soldiers, and shortly afterwards the Viceroy Chao Erh-feng was murdered at Chengtu.

(5) Give reasons for the outbreak of the Russo-Japanese War (1904-1905)

ANS. Reasons for the outbreak of the Russo-Japanese War:-The victory in the Sino-Japanese war marked the beginning of Japanese imperialist expansion. Japan continued to increase her army and nacy and began to prepare for the next conflict which was to be with Russia.

We have seen in the above chapter that Japan had to give back the Liaotung peninsula and Port Arthur in 1895. But the very year China was forced to give a lease of these to Russia and also the right to link up Port Arthur by rail through Manchuria with the Trans-Siberian railway. Japan thus saw that her rival in the Far East was Russia.

On the other hand, Russia continued to send large forces of troops to Manchuria and many ships to Port Arthur and Dairen." During the Boxer troubles, Russia had occupied the three provinces of Manchuria. Japan demanded that she withdraw from these provinces. Russia promised she would do so, but did not. Eventually Japan was ready for war and it began in February 1904. In 1902, England had made an alliance with Uapan but she was only bound to help Japan if Japan were attacked by another country in. addition to Russia.

Japan thereupon (February 9, 1904) attacked and defeated & Russia fleet off port Arthur and the war started.

The Results of the Russo-Japanese War:-The Russo-Japanese War had important effects on the situation

in the Far East:-(a) It gave Japan the upper hand in Korea and the southern; part of Manchuria. Russia's lesse of Port Arthur was transferred. Korea became a Japanese sphere of

influence after 1905 and was formally annexed a few years later (in 1910). Thus began a career of territorial expansion on the mainland, at China's expense, (b) Japan's success made England quite willing to conclude a close alliance with the victor, in 1905 which emboldened

the dapanese to go on straight forward her continental (c) For China, the war was a bitter lesson. Russia and Japan fought the war on Chinese soil and usurped the right to

dispose of China's Manchuria provinces, utterly disregarding China's wishes in the matter. (d) Moreover, the defeat of gigantic Russia by the small

Europeanized nation of Japan was proff enough that Europeanization was worth while. At the beginning of the war, the little nation of the Far East was a dwarf compared with gigantic Russia;

the Russians felt sure of an easy victory. Japan had only a population of 45,000,000 people while Russia 130,000,000. Japan was just a small fox barking at a, burely bear. Painful indeed was Russia's surprise when her armies were defeated time and again with terrible loses by this new Westernized nation.

# 英中會考經濟及公共關係科答案

Hong Kong English School Certificate Examination

E.P.A. (Answers continued) .

5. (b) What benefits does a country gain from taking part in 3 international trade?

In international trade a country can obtain benefits by specialisation. Specialisation has led to important consequences. It leads to the better use of land, labour skill, and technique. It lowers transport costs. It can also lower the production cost. The industry of a region

can be adapted to its natural resources. The farmers can make full use of its land. A country can also gain by importing goods that are can not produce herself. She can import raw material to make ... into finished goods for her own domestic market. Then the country can enjoy other's specialisation.

By international trade both importing and exporting countries benefit from better prices. Each country exports its surplus products which can command higher prices abroad or imports those goods which are lower in

brices in country abroad. By competition, countries may achieve a favourable balance of trade which leads to full emplayment. A country will gain if the value of exports is more than the value of imports. Under these conditions the people will enjoy high standard of living.

(c) Explain fully what is meant by perfect competition! What effect does imperfect competition have on the price of a

In the economic field, competition refers to a secrety of market relations. Pure, perfect, imperfect or free-these and many other terms are employed to describe the competitive pattern of economic market.

In perfect competition, the commodity or service is more or less uniform. There are many producers of the commodity. The amount of output of, each producer is relatively small.

The price of the commodity in period competition is determined by the conditions of supply and demand. The producer has little control over the price. Buyers are continually bargaining with each other to obtain scarce supplies of desirable commodities on the cheapest possible terms, and sellers are rival seeking to dispose of their goods at the highest possible price. It is governed by the law of supply and demand. In imperfect competition the producers can raise the

price by restricting output. The price of the commodity can be controlled by the producers. The price is more or less maintained. The producer stands ready to supply more or less of his products in response to the changes in demand without a change in price. The producers can make a maximum profit from sales and the cost of product will remain as low as possible. Finally, it can affect the quality of the product in order to acquire a greater, profit.
